

**Amendments to the Specification:**

Please replace the paragraph that begins on page 6, line 27, with the following paragraph:

Copies placed on a different medium (media transfer) can be produced and the copies shipped by a carrier of the user's choosing, to an address designated by the user. Media transfer notification data can be provided to the user automatically through the device or a device that is less interactive, i.e. receive limited data only. The media transfer notification data could include any level of information such as that a print request # XXX has arrived in St. Louis (heading for New York), or that CD's ordered 1/1/01 were shipped on 1/4/01. In addition, transaction numbers could be assigned for such events as successful files downloaded to the server, dates as to when media transfers were shipped, or mail tracking data. Alternatively, media transfer notification data could be provided by the server, when queried by the device, once the account has been accessed.
